IBM ASSIGNMENT – 2

Name: Jothika R
Roll no: 713519CEEC012

ASSIGNMENT QUESTION:
Build a python code, assume you get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

PYTHON CODE:

```
import random
from time import sleep
while True:
temperature=round(random.uniform(10, 50),2)
humidity=round(random.uniform(10, 100),2)
print("\nTemperature =", temperature,"degree celsius")
print("Humidity = ",humidity,"%")
if(temperature>32):
print("STATE : ALARM ON")
else:
print("STATE : ALARM OFF")
sleep(5)
```

EXECUTION RESULT
Output

```python
import random
from time import sleep

while True:
    temperature=round(random.uniform(10, 50),2)
    humidity=round(random.uniform(10, 100),2)
    print("\nTemperature =", temperature,"degree celsius")
    print("Humidity = ",humidity,"%")
    if(temperature>32):
        print("STATE : ALARM ON")
    else:
        print("STATE : ALARM OFF")
    sleep(5)
```
Shell

```
3Temperature = 35.36 degree celsius
Humidity =  16.02 %
STATE : ALARM ON
Temperature = 20.38 degree celsius
Humidity =  18.08 %
STATE : ALARM OFF
Temperature = 40.13 degree celsius
Humidity =  23.37 %
STATE : ALARM ON
Temperature = 34.18 degree celsius
Humidity =  27.09 %
STATE : ALARM ON
21Temperature = 20.49 degree celsius
Humidity =  15.44 %
STATE : ALARM OFF
Temperature = 45.9 degree celsius
Humidity =  78.05 %
STATE : ALARM ON
Temperature = 28.68 degree celsius
Humidity =  58.49 %
STATE : ALARM OFF
Temperature = 43.48 degree celsius
```
